

System Introduction

1. Desktop Instruction

After remote connection via VNC, the Raspberry Pi system desktop is as shown in the figure below:

These seven icons are mainly to be noticed.

: ArmPi FPV PC software containing action editing, calling and other function

: Color model parameter adjustment tool

: File manager-visual file directory interface

: ArmPi FPV home directory

: Recycle bin

: Menu bar

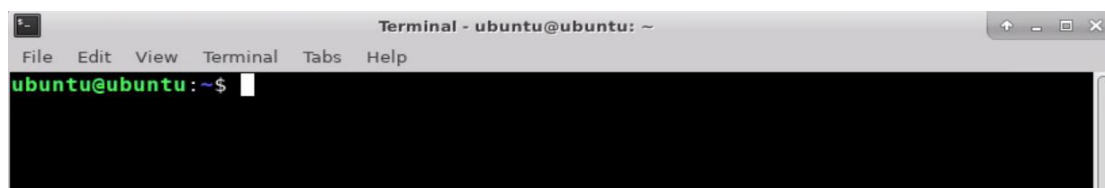

: command line terminal for entering command to operate

2. Programming Instruction

The entered command must be strictly distinguished between uppercase and lowercase and spaces, and the keywords support the "TAB" key completing.

- 1) Click  to find  and open the terminal

2) Enter “ls” command and then press “Enter” to list all the documents. As shown in the figure below

```

Terminal - ubuntu@ubuntu: ~
File Edit View Terminal Tabs Help
ubuntu@ubuntu:~$ ls
ArmPi_PC_Software  Music      Videos    hiwonder-toolbox
Desktop           Pictures   armp_i_fpv lab_config
Documents         Public     core       pigpio
Downloads         Templates create_ap  release.txt
ubuntu@ubuntu:~$
  
```

Name	Function
Armpi_fpv	Store all the games and related program source code
ArmPi_PC_Software	ArmPi PC software source code (based on QT)
hiwonder-toolbox	Wi-Fi management tool

3) Enter “cd armpi_fpv/src/” command. Then enter “tree -L 1” to list all folders and files in the directory. The game files is shown in the red box.

```
ubuntu@ubuntu:~/armpi_fpv/src$ tree -L 1
