

Attention

1. Power Supply

- 1) Charge with the provided power adapter (7.5V 6A). If the DC power cables are not connected to the expansion board, do not directly connect the adapter to prevent the danger of short circuit caused by the contact between the positive and negative poles.
- 2) Connect wires to the expansion board to the wiring, red wire to the positive pole (+) and the black wire to the negative pole (-), as shown below:

- 3) Please power off the robotic arm if not being used.

2. Games Attention

Place place the device and camera according to the tutorials of folder “1.

Getting Ready/Lesson 2 Arm Pi Assembly&Calibration". The camera calibrate is very important to the games' outcome.

Do not place the blocks under the robotic arm to avoid being blocked.

Do not place the color blocks too closed, otherwise it will affect the gripping performance.

3. Usage

- 1) The images were written before delivery.
- 2) Keep the robotic arm away from your face when running.
- 3) When the robot is working, do not put your fingers in the working range of the robot joints to prevent accidental injury.
- 4) Please use the robot on smooth hard surfaces. Otherwise, it may fall and suffer damage.
- 5) After the robotic arm is Powered ON, please do not twist or bend the robot's joints, this will damage the robot's servos and joints.
- 6) The servos include precise mechanical components. Servos may need to be replaced after a period of time or excessive use.
- 7) After the robotic arm is powered on, please do not touch the Raspberry Pi expansion board or on-board components on the Raspberry Pi with metal objects or liquids, otherwise the product may be damaged.
- 8) If the robot arm runs for a long time, the servo will heat up. Please turn off the robotic arm until the servo cools down.

4. Control and Connection

- 1) Turn on the GPS service before opening the APP
- 2) ArmPi supports Wi-Fi direct, wired, and Wi-Fi LAN modes.
- 3) If the camera image is not clear, please manually adjust the focus by rotating the lens.
